HOME CARE INSTRUCTIONS FOR PETS WITH GASTROINTESTINAL ILLNESS

PLEASE DO NOT FEED YOUR PET FOR 12-24 HOURS. THIS ALLOWS THE GASTROINTESTINAL TRACT TO REST AND WILL USUALLY HELP SLOW DOWN DIARRHEA AND VOMITING.

SPECIAL INSTRUCTIONS:

AFTER 12-24 HOURS – IF YOUR PET HAS NOT HAD ANY VOMITING HE/SHE CAN BE FED A BLAND DIET IN SMALL, FREQUENT MEALS. THESE DIETS ARE HIGHLY DIGESTIBLE AND MAKE IT EASIER FOR THE DIGESTIVE TRACT TO PROCESS THEM. PLEASE FEED THE BLAND DIET FOR 3-4 DAYS AND THEN GRADUALLY MIX IN YOUR PET'S REGULAR DIET. WATER CAN ALSO BE GIVEN IN SMALL AMOUNTS AT A TIME.

RECOMMENDED DIET:

YOUR PET MAY CONTINUE TO HAVE DIARRHEA FOR A FEW DAYS ALTHOUGH THE AMOUNT AND FREQUENCY SHOULD GRADUALLY DECREASE. IF YOUR PET HAS ANY VOMITING PLEASE GIVE US A CALL.

IF YOUR PET CONTINUES TO HAVE PROBLEMS OR IF YOU HAVE ANY QUESTIONS PLEASE GIVE US A CALL.
